개요 (Summary)

MIL-DTL-26482 Series II 계열의 커넥터는 당사의 축적된 기술로 개발된 커넥터입니다. Bayonet Coupling 방식으로써 전기, 기계 및 환경적 특성이 우수하여 고도의 신뢰가 요구되는 항공장비 및 미사일 첨단통신장비 등에 널리 사용되고 있습니다. 특히 EMI 차폐능력이 탁월하여 전자파 방해를 완벽히 차단시키므로 전혀 외부간섭을 받지 않고 정확한 시그널라인을 구축할 수 있는 것이 장점입니다. 또한 케이블 작업 시 간단한 Crimp Tool로 결선이 가능하므로 납땜 작업 시 발생할 수 있는 불량을 방지할 수 있고 작업시간의 단축이 큰 장점입니다.

The MIL-DTL-26482 Series II connectors were developed based on years of our company's technological skills. These connectors use the Bayonet Coupling method, which have an excellent electrical, mechanical, and environmental characteristic. Therefore it is widely applied in fields that require the highest reliability such as aviation equipment and state-of-the-art missile communication tools. In particular, the EMI screening ability is excellent and can completely isolate electromagnetic waves which in turn can establish an accurate signal line without external interference. Also, when working with cables wiring is possible using a simple Crimp Tool. Thus, the distinctive features are that it can prevent defects during soldering and reduce the work time on the job.

YH series

MIL-DTL-26482 Series II Connector
